

## Claims

The claims are amended as follows:

1. (Currently Amended) A server connected to a client via a network for editing image data based on image editing commands from the client, the server comprising:
  - a storing unit to store image files;
  - a first image editing unit to edit a low resolution part of an image file stored in the storing unit ~~in response to~~ in synchronization with receiving an image editing command from the client;
  - an informing unit to inform the client other that the image editing process has been completed by the first image editing unit;
  - a job supplying unit to form a job commanding a high resolution part of the image file stored in the storing unit to be edited and to insert the job in a queue; and
  - a second image editing unit to asynchronously edit the high resolution part of the image file stored in the storing unit ~~in response to the job formed by the job supplying unit~~ with respect to the received image editing command from the client in accordance with the job inserted in the queue by the job supplying unit.
2. (Cancelled)
3. (Previously Presented) The server as claimed in claim 1, wherein when the client commands the image file to be displayed, encoded data of the edited low resolution part of the image file is transmitted to the client.
4. (Previously Presented) The server as claimed in claim 1, wherein when the client commands a portion of the high resolution part of the image file to be displayed in a case where the second image editing unit has not completed editing the high resolution part of the image file, the portion of the high resolution part of the image file is edited, and the edited portion of the high resolution part of the image file is encoded and transmitted to the client.

5. (Previously Presented) The server as claimed in claim 4, wherein the client is informed that the portion of the high resolution part of the image file cannot be displayed when the image editing process that is being conducted is an image editing process that cannot be conducted on a portion by portion basis.

6. (Previously Presented) The server as claimed in claim 1, wherein when the client commands a printing process to be conducted for the image file including the high resolution part of the image file, in a case where the second image editing unit has not completed editing the high resolution part of the image file, the client is informed that the printing process cannot be conducted.

7. (Currently Amended) An image editing method used with a server image connected to a client via a network for editing image data based on image editing commands from the client, the image editing method comprising:

storing an image file;

editing a low resolution part of an the stored image file ~~in response to in synchronization~~  
with receiving an image editing command from the client;

informing the client that the image editing process has been completed;

forming a job commanding a high resolution part of the image to be edited;

and

inserting the job in a queue; and

asynchronously editing the high resolution part of the image in response to with respect to the received image editing command from the client in accordance with the job inserted in the queue.

8. (Cancelled)

9. (Currently Amended) An article of manufacture having one or more recordable media storing instructions thereon which, when executed by a computer having server, where the server is in communication with a client via a network, cause the computer to:

~~store~~ storing an image file;

~~edit~~ editing a low resolution part of an the stored image file ~~in response to~~ in synchronization with receiving an image editing command from the client;

~~inform~~ informing the client that the image editing process has been completed by the ~~first~~ image editing function;

~~form~~ forming a job commanding a high resolution part of the image file to be edited; and

inserting the job in a queue; and

~~edit~~ asynchronously editing the high resolution part of the image file ~~in response to~~ with respect to the received image editing command from the client in accordance with the job inserted in the queue supplied from by the job supplying inserting function.

10. (Cancelled)

11. (Previously Presented) The article of manufacture as claimed in claim 9, wherein when the client commands the image file to be displayed, encoded data of the edited low resolution part of the image file is transmitted to the client.

12. (Previously Presented) The article of manufacture as claimed in claim 9, wherein when the client commands a portion of the high resolution part of the image file to be displayed in a case where the second image editing function has not completed editing the high resolution part of the image file, the portion of the high resolution part of the image file is edited, and the edited portion of the high resolution part of the image file is encoded and transmitted to the client.

13. (Previously Presented) The article of manufacture as claimed in claim 12, wherein

the file is informed that the portion of the high resolution part of the image file cannot be displayed when the image editing process that is being conducted is an image editing process that cannot be conducted on a portion by portion basis.

14. (Previously Presented) The article of manufacture as claimed in claim 9, wherein when the client commands a printing process to be conducted for the image file including the high resolution part of the image file, in a case where the second image editing function has not completed editing the high resolution part of the image, the client is informed that the printing process cannot be conducted.
